

Architect - Software Engineering

[Apply Now](#)

Company: Axiata Digital Labs

Location: Colombo

Category: other-general

We are looking for a highly skilled, forward thinking ASA to specialize in the design, development, and implementation of specialized applications and technology solutions to meet our business needs. With a strong emphasis on cloud and security, this position will require the management and oversight of multiple applications used to support our capabilities to ensure a scalable, reliable, and highly available architectural system.

In this position you will work in an agile environment that supports the rapidly growing business requirements.

You will have the opportunity to collaborate with a group of talented software architects and engineers to design and architect our next generation of highly scalable, robust technology solutions.

Requirements

- Bachelor's Degree in Computer Science, Information Technology or related field
- 6 years or more experience as a senior developer or architect in large IT projects
- Demonstrated work with highly scalable, micro-service based applications.

Internal

- Demonstrated ability in designing and architecting enterprise-level applications utilizing RESTful APIs and Event Driven Architecture
- Deep knowledge with various engineering technologies such as Java, Spring Boot, PL/SQL, Docker, Kubernetes, Prometheus, ELK Stack, Istio, Kafka
- Architecting, designing and developing applications on the AWS platform

- Designing and building application using Container and serverless technologies
- Experience architecting highly available systems that utilize load balancing, horizontal scalability and high availability
- Good exposure to Agile software development and DevOps practices such as Infrastructure as Code (IaC), Continuous Integration and automated deployment
- Continuous Integration (CI) tools (e.

g. Jenkins)

- Exposure to Agile development methodologies
- Configuration Management platforms (e.g.

Chef, Puppet, Salt, or Ansible)

- Deep understanding of DevOps processes and technologies around version control, test automation frameworks, continuous integration/deployment and production support

Responsibilities

- Conduct analysis to identify trends in application architecture and apply them in solution development recommendations. They will assess the interaction/interface between applications, databases, and middleware systems to identify and address problems/gaps in functional coverage.
- Drive the application/software life cycle to ensure an improved/efficient system and design applications to follow specific architectural patterns in order to meet our standards.

They

carry out design and source code reviews to ensure conformance to set standards.

- Provide technical leadership and mentorship to a high functioning team of application architects and software engineers
- Have in-depth knowledge on application performance management and profiling standards and oversee capacity planning processes
- Be responsible for ensuring the security of a specified application portfolio in accordance with enterprise security requirements.
- Exercise independent judgment and decision making on complex issues regarding all job duties and related tasks and works under minimal supervision.
